

This document outlines the **Phase 2 Development Needs** for the **La Ultra: Run & Bee** PWA. You can share this directly with Viren to help him refine the "First Contact" prototype into a functional medical-grade movement tool.

I. Branding & Homepage Identity (The "Manifesto")

The homepage should function as a hook for inclusivity, focusing on **women (35+)**, the **elderly**, and those recovering from injury.

- **Branding:** Finalize the name as "**La Ultra: Run & Bee**".
- **The "I - My - Me" Layout:** Spread the three points of the **CORE FRAMEWORK** across the page (horizontally or in a balanced grid) to give each pillar its own visual space.
- **The Message:** Introduce the "**Mountains Within**" concept—emphasizing that distance and toughness are relative to the individual's current state.
- **Access Gate:** Implement a strict sign-in/registration wall. Features like "Feel," "Move," and "History" must remain hidden until the user has registered and selected their journey length (**30 to 270 days**).

II. The "Feel" Module: Alignment & Reflection

This section is the foundation for the "Digital Detox".

- **UI Alignment:** Clean up the "Feel" page layout so that all 10 elements (Sleep, Stress, Joint Fluidity, etc.) are perfectly aligned for a professional, clinical look.
 - **Contextual Nudges:**
 - If a user provides an unusually low or high score, prompt them to detail the "why".
 - **The Reflection Box:** Keep the 50+ word reflection box optional to avoid it becoming a "chore," but encourage its use as a personal diary.
 - **Automation:** Submitting the "Feel" data should automatically transition the user to the **MOVE** section.
-

III. The "Breathe" Module: Variable Foundations

Breathing is the foundation of the **5-BPM cycle** and should be the first activity of every session.

- **Customizable Rhythms:** While the default is set to a **4-second inhale** and **8-second exhale**, provide an interface for the user to adjust these durations to fit their current lung capacity while maintaining a slow, controlled rhythm.
- **The Anchor:** The metronome must stay fixed at **60 BPM** to ensure the user internalizes the actual length of a second.

IV. The "Move" & "Running" Modules: Functional Logic

- **The 5 Pillars Header:** Display the "5 Pillars" (*Smile, Tall Puppet, Relaxed Fists, Uncurl Toes, Breathe*) at the top of the page as a global reminder for all exercises.
- **Principles Migration:** Move **"THE THREE PRINCIPLES"** from the homepage to the top of the **Running** page as a persistent daily reminder for form.
- **The "Slow-Motion" Control:**
 - **Metronome:** Tapping "Start" on a strength exercise initiates the **60 BPM metronome**.
 - **UI Cleanup:** Remove the "All" category from the Move page to simplify the focus.
 - **The Control Loop:** Replace the current back-navigation with a **"Next"** button. After completing an exercise or hitting **"Missed,"** the user should be taken immediately to the next movement in the sequence.
- **The "Running" Cadence:** The running section metronome should be selectable between **160, 170, 180, and 190 BPM** for drills like spot-jogging and skipping.

V. Quality Metrics & History

The app must capture **Quality** over **Quantity**.

- **New Metrics:** For every movement, capture two data points:
 1. **TPR (Time Per Rep):** How long was one single, ideal repetition?
 2. **Quality Score:** A subjective 0–10 rating of how "connected" and "clean" the

movement felt.

- **History Tab:** All records from "Feel" and "Move" (including TPR and Quality Scores) must be saved and visualizable in a **History** dashboard for long-term progress tracking.

Summary of Presentation Changes for Viren

Feature	Change Required
Homepage	Move "Three Principles" to Running page; spread "I-My-Me" philosophy points.
Feel Page	Align all UI elements and rating scales.
Breathe Page	Add options to customize inhale/exhale durations.
Move Page	Remove "All" filter; move 5 Pillars to the header; add "Next" button navigation.
Brand Identity	Emphasize "Mountains Within" and inclusivity for women and the elderly.
